

# Euro Science

As a non-profit organisation of individual members regardless of their scientific discipline, career stage or employment sector, EuroScience aims at advancing and improving the way research is performed and fosters the dialogue between science and society. In the interest of our members we promote excellent science, encourage communication of science to society, showcase scientific advances including the impact on society and contribute to scientific debate.

## Our objectives...

- **Advancing science for the pursuit of knowledge and for the benefit of all society**
- **Fostering a scientific culture based on integrity, fairness and openness as well as the rights and responsibilities of researchers**
- **Shaping the science policy in Europe**

## ...and how we reach them!

### The Science Policy Working groups

EuroScience has dedicated working groups where we discuss and debate on Science and Society issues, and develop policy briefs and statements for both policy makers and the general public.

### The EuroScience Open Forum

Europe's largest multidisciplinary meeting dedicated to scientific research, innovation and dialogue with society.

### The webzine EuroScientist

Our online journal for all involved or interested in European science. It covers a variety of issues affecting scientists, especially about what is happening at the intersection between science and society.

### The awards

We recognise and promote excellent science and societal engagement through awards like the European Young Researchers and the European Science Writers Awards.
